**FEVER?  
ACHES?  
PAINS?  
COUGH?  
SORE THROAT?**

When you reach for the tissues this flu season, think CAPSTONE-2. The CAPSTONE-2 clinical research study will try to find out if an investigational flu drug can speed up the recovery of people with flu who are at risk of further complications, when compared to a placebo (a look-alike containing no medication) and a drug already approved to treat flu called Tamiflu® (also known as oseltamivir).

**THOSE TAKING PART MUST:**

**HAVE HAD FLU SYMPTOMS  
(SUCH AS FEVER, ACHES, PAINS,  
COUGH, SORE THROAT) FOR  
LESS THAN 48 HOURS**

**BE AT LEAST 12 YEARS OLD**

**BE AT RISK OF DEVELOPING FURTHER  
COMPLICATIONS (FOR EXAMPLE, THOSE  
WITH ANOTHER HEALTH CONDITION AND  
THOSE OVER THE AGE OF 65)**

Taking part in the study means visiting a clinic between seven and nine times for health checks. These checks, along with any study-related drugs, will be provided at no additional cost. You do not need health insurance, and compensation for time or travel may be provided.

Because you need to enroll in the study within 48 hours of becoming ill, it is important to get in touch with the study team as soon as possible after symptoms appear.

**IF YOU THINK YOU/YOUR CHILD MAY  
BE SUITABLE, PLEASE CONTACT:**
